To whom it may concern,

I am writing to express my strong interest in the test position at test. Having self-taught myself various coding languages – which gives me a great advantage when it comes to developing scripts and troubleshooting issues –, I have now applied to computer science courses at university. As a passionate and driven individual, I am confident that my enthusiasm for technology and my communication skills make me an ideal candidate for this role.

My coding skills have helped me to create scripts, build and test game servers, and set up a secure VPN. Additionally, I have created and implemented a portfolio on GitHub using Matplotlib and Pandas to analyse data sets from Kaggle and develop scripts with VS Code and Jupyter Notebooks. I recently had the experience of implementing and testing TC-Admin and MultiCraft game panels while building my own server for my project called Extreme Gaming. To do so, I used Docker and Docker Compose to run MySQL servers and set up a VPN to connect my server network from any location in the world. In addition, I set up an Ethereum Mining Server. My curiosity for cloud and server technology and my technical knowledge should be advantageous in this role.

Moreover, I am an articulate communicator. My confidence lies in my ability to understand complex technical information and explain it in a comprehensible way. I am also a proactive individual, who is not afraid to take initiative when needed. Thereby, I always look for ways to develop and improve my knowledge. In the past, this has meant taking relevant examinations and courses to enhance my understanding.

Overall, I am eager to join the test team and I am confident that I can make a meaningful contribution. I have the required skills, knowledge, and enthusiasm to make a positive impact on the team. I am looking forward to the opportunity to discuss my application further.

Thank you for your time and consideration.

Yours Sincerely,

James Love
